

SMART METER INTEGRATED TESTING AND HIGHER ANALYSIS (SMITHA)

Bharat Smart Meter Protocol Analyser

Joint Project by CPRI, Bengaluru & C-DAC, Thiruvananthapuram

Economical test tool for testing open protocol systems of IEC62056 protocol based devices like Smart Energy meters to ensure their compliance to National/ International standards. Performs both conformance and functional evaluation tests of Energy Meters.

Features of SMITHA

- ❖ Tests conducted based on standards: IS16444 series & IS 15959 series
- ❖ Protocol conformance as per IEC62056 customized with Indian requirements
- ❖ Communication Profiles Supported: High-Level Data Link Control (HDLC) and Transmission Control Protocol TCP/IP
- ❖ Supports Communication module of different variants like NAN & WAN
- ❖ Implementation of Basic level and Advanced level security using encryption and authentication algorithms based on standards NIST 800-38D (Mechanism ID5) and manufacturer specific algorithms (Mechanism ID2)
- ❖ Conformance Tests include Serial Physical Layer(SPL) tests, Association Layer (AL) tests, Specific Objects / Parameters of Energy Meter (SOEM) tests & Security tests
- ❖ Functional evaluation tests for downloading different profile data, general purpose parameters, programmable parameters etc.

System Requirements

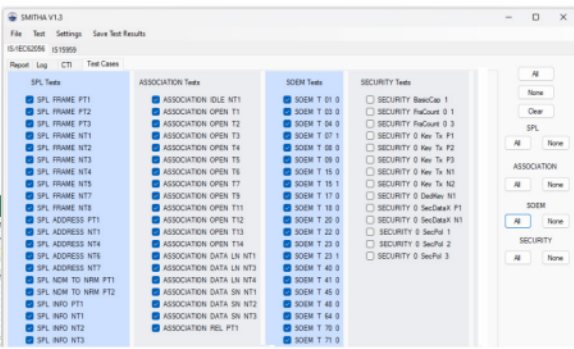

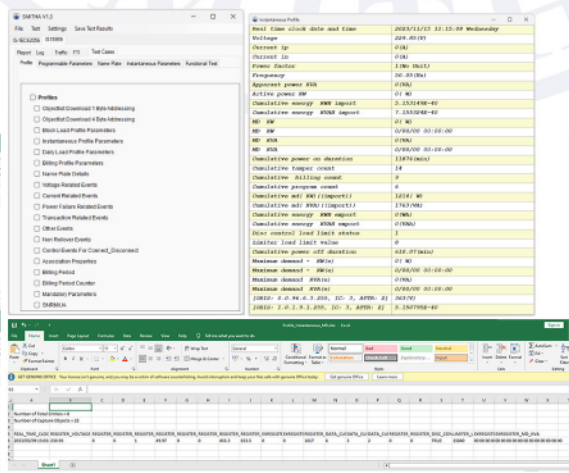

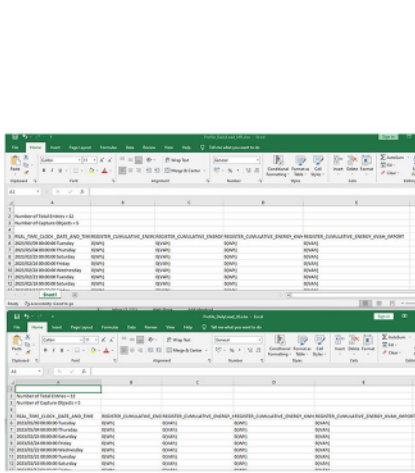

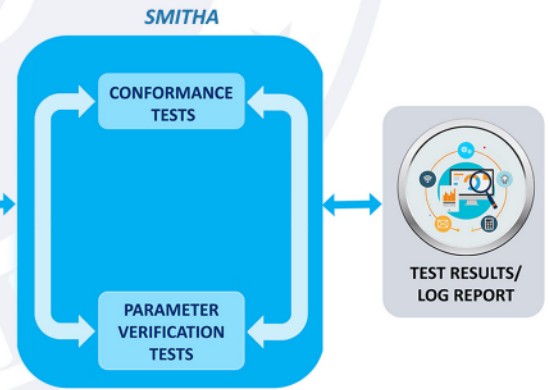

- ❖ Operating System: Windows 10 or later
- ❖ Framework: .Net Framework 4.8 or above

Additional features:

- ❖ Firmware upgrade
- ❖ Remote connect /disconnect of meters
- ❖ Customized report generation

SMART ENERGY METER
